

## SEQUENCING EXERCISES-ADVANCED LEVEL

Place the sentences in a logical and coherent order. Cut and paste or write in the boxes below.

### The Hearing Process

The wave passes through the ear canal, vibrating the eardrum.

The vibration passes to the auditory nerve to carry the information to the brain.

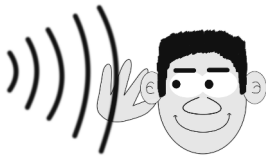

The vibration is transmitted to the ossicles chain and from there it passes to the middle ear and the inner ear.

A sound wave reaches the ear.

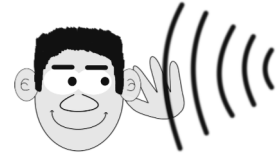

In this organ the sensation of hearing occurs.
