Date _____

Adjectives

An adjective describes a noun.

Circle the adjectives in the story.

Spring

Spring is one of the four seasons on Earth, the wonderful planet where we live. In the northern hemisphere, the first day of Spring begins between March 20 and 21. In the southern hemisphere, it begins between September 21 and 23.

When spring arrives, there are some important changes in the climate. Cold temperatures gradually become warmer, and gentle rains become more abundant. Thanks to these climate changes, the plants grow, and there is an explosion of bright colors and sweet smells everywhere.

Gardens are filled with beautiful blossoms and young plants are loaded with bright green leaves. The neighborhood parks flourish, and the local orchards are filled with fruits, vegetables, and greens, which grow as the warm days go by. Gone are the cold winter days, where snow and freezing temperatures chilled flowers and plants.

With the coming of spring, new animals also arrive. Some animals fall asleep during the winter and wait for the warm spring weather to arrive before waking up. Colorful butterflies, buzzing bees, chirping baby birds, and curious animals greet the arrival of spring and explore the exciting world.
