

Name _____

Earth

Earth is the planet on which we live. The planet appears blue from space because it is covered mostly by water. One third of our planet is covered by land. The whole planet has a layer of oxygen and nitrogen that we call air.

© Bilingual Planet

Most of the water covering our planet is in the oceans and seas.

It is saltwater. The water in lakes, ponds, rivers and waterfalls is freshwater. The land includes the continents and islands. The air surrounding the Earth is a mixture of gases and form the atmosphere.

1. Color the parts of the Earth according the chart.

blue	→	water
green	→	earth
gray	→	air

2. Classify the components of the Earth. Circle the main component.

rivers **lakes**
islands **seas**
gases **oceans**
continents

water		earth	air
salt	fresh		
_____	_____	_____	_____
_____	_____	_____	_____
